

# Dr. Wilden Home Laser

## The healing power of the laser for your daily life

Solve your ear problems in the SMARTEST way

## The father of the Home Laser

Dr. M.D. Lutz Wilden is a world renowned specialist in laser therapy - particularly concerning the inner ear.

Ever since his early youth, Dr. Wilden has been interested in biology and the connections inside the human body. Consequently, his career choice was obvious. After doctorate in Heidelberg (Germany) and completing his wide medical training, he specialized in the inner ear.

He practices a method of treatment that has been used for many decades to support the healing process: **Therapeutic laser light!**

**Dr. Wilden states that the chances of successful treatments are high, even in the cases of old damages.**

## The great benefits of home therapy

- Your acute medical discomforts will already improve significantly during the first home therapy sessions. This improvement of your ear situation will become more noticeable and stable every day
- You can achieve a biologically complete regeneration of your overstrained auditory- and vestibular cells in your inner ear, depending on the individual medical situation and the individual age
- Home therapy is the most comfortable and cost-effective form of therapy. You have constantly access to high-quality laser light
- Benefit from the full spectrum of numerous body problems that can be treated - because of the laser light's underlying principle, which is the biostimulative effect on all the cells in your body
- During your time of regeneration, you will be supported by Dr. Wilden with his many decades of therapy know-how

## Revitalise your hearing

- The light of the Home Laser leads to an increase in the mitochondrial production of ATP (Adenosine triphosphate), the cell energy, that fuels our cellular functions
- As a result, there is an increase in the healing abilities of injured or weakened cells
- In the special case of the laser light application to the inner ear, the self-healing powers of the hair sensory cells are stimulated, which ultimately leads to significant improvements of the hearing and balance organs - as well for tinnitus and vertigo!

## Too good and simple to be true?

For more than 50 years, Laser Therapy has proven to be a therapeutic medium. The Hungarian Dr. Endrè Mester (1903-1984) discovered improved healing of wounds that had been difficult to cure. And since that time, Laser Therapy has been constantly progressing world-wide. In addition, there are numerous other possible therapeutic applications, especially for orthopaedic problems of the joints as well as for strengthening the immune system.

## Why should humans not also have the ability to benefit from light?

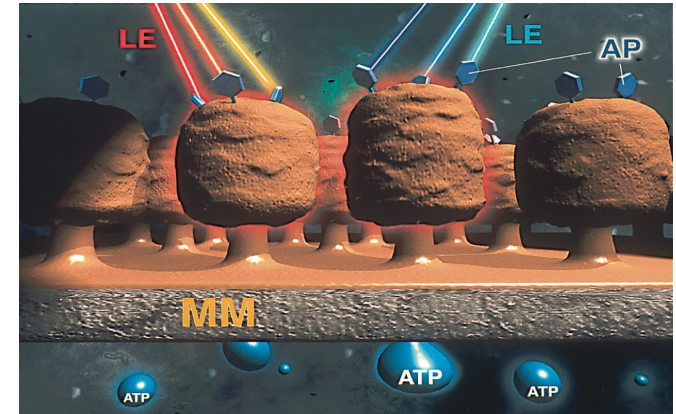

When we look at nature, we see that plants accomplish tremendously intelligent energy production with photosynthesis.

Our body is made up of about five trillion individual cells. Each of these cells is its own living being. In order to live, every cell must absorb energy from its environment and convert the absorbed energy into cell energy with the help of biological power plants (mitochondria).

**Laser therapy is based on the assumption that our biological power plants (mitochondria) can absorb light directly as primary energy.**

LLE, LE = laser light energy  
M, MM = mitochondria  
ZK = cell nucleus  
ATP = cell energy for our cellular functions  
AP = „antenna pigments“ of the mitochondria (=electron carriers)

**The assumption is still rejected to this day by the medical „mainstream“, although the absorption of laser light energy by the mitochondria was already determined many years ago.**

The structural design of the mitochondria is also well known. It is a large and folded area, full of antenna pigments, which are wave-length specific absorbing light, and which are using the laser light energy to improve their cellular energy (ATP) production. They are located in a millionfold recurring structure, the so called respiration chain.
